Greener Pastures

Growing recovery
with science.

About Greener Pastures

While the PAT protocol evolved from years of study and research as medical cannabis caregivers, Greener Pastures was borne from a deep desire to solve the escalating opioid epidemic after several devastating personal losses made it clear that the available treatment options fail far too many. We propose a natural, safe, non-toxic option based on emerging science that honors each unique path to long-term health and recovery.

What Is Recovery?

SAMHSA's (samhsa.gov) working definition of recovery:

A process of change through which individuals improve their health and wellness, live a self-directed life, and strive to reach their full potential.

Four major dimensions that support a life in recovery:

Health Home Purpose Community

Our Plant-Based Medicines

The apothecary is stocked with a variety of plant formulations, all lab-tested for consistency and purity: cannabis, kratom, ashwagandha, passiflora, kava, skullcap, st. johns wort, turmeric, moringa and more.

Our Plant-Based Research

We are honored that our innovative PAT protocol will be the subject of a scientific study of the Universities of Rochester (Dr. Marc Swogger,) British Columbia (Dr. Zach Walsh) and New England (Dr. Selma Holden,) who will study and document the efficacy, effects and outcomes of kratom, cannabis and ashwagandha in the treatment of substance use disorder (SUD.)

We are excited that the data and results might catalyze a paradigm shift in the care options for people who suffer from addiction

What Our Clients Say

Clients report a 75-95% reduction in severity of withdrawal symptoms, while also experiencing a faster onset of feeling well and healthy while following their PAT recovery program.

The PAT protocol is focused in the delivery and efficacy of innovative plant-based approaches to detox, repair of the substance-damaged body and brain and long-term recovery from addiction.
